Martin Allen is a Senior Blockchain Engineer at [FOAM](#). I saw his talk about PureScript lib he wrote at FOAM and that's why I reached out to them. He was responsible for blockchain and backend development. We worked closely together to move the project forward.

I was Irakli's manager during his time at FOAM. We worked very closely together over a period of 18 months to develop the FOAM Spatial Index, a sophisticated web application allowing users to interact and reason about geospatial data on the Ethereum blockchain. Irakli is a very talented front end engineer, with a deep knowledge of JavaScript development and CSS implementation and management. He is also a strong functional programmer, having worked with us to develop the suite of PureScript libraries that support communicating with the Ethereum blockchain as well as various visualizations and UI libraries for interacting with Mapbox and WebGL.

He is an effective and independent remote worker. As our team was primarily based in NYC he worked hard to be present during important meetings regardless of the time difference. He made sure to be actively working during a large portion of NYC working hours, and was always responsive to calls and messages when we had important deadlines that required real time communication.

I would most certainly hire him again, and wish him luck in the future.

John A De Goes was CTO of SlamData (now it's called [Precog](#)) at that time, his email is. I know him from a tech talk of his I saw on youtube about free applicative, the topic I was interested in at that time. I have reached out to him and thanks to him, I got into SlamData. He is my FP hero.

I had the pleasure of employing Irakli on a front-end project a few years ago, a rich single-page application with visual editing, drag & drop and other rich features common to Google Docs. Irakli never ceased to impress me with his ability to rapidly pick up new technologies, dive into unfamiliar code, and make improvements quickly and safely in a way that delighted end users. If you get a chance to work with Irakli, you should jump at the opportunity!

Ioseb Dzmanashvili is Head of Embedded Software Development, Managing Partner at [AzRy LLC](#). He was/is my Sensei, I started working at AzRy because I wanted to work close to him.

- Recommendation:

I have known Irakli for more than seven years. I first learned about him from his involvement in the Georgian programmer community where Irakli played one of the key roles as a co-organizer of the largest hackathon series in Georgia. In 2014 we offered him a staff position at AzRy LLC, a leading software and hardware engineering company in Georgia. Irakli joined AzRy as a software engineer and stayed with us through 2015.

I can confirm that he is a person of great integrity, deeply knowledgeable in a wide range of subject areas and is extremely dedicated to work.

While at AzRy, Irakli demonstrated exceptional leadership skills, helping us integrate and deploy new technologies. He has maintained a great relationship with our customers and has contributed to the company's success. Irakli is very professional in his work. One of the many personal characteristics I have always appreciated in him is that he is not afraid to take initiative and is always in pursuit of finding new, better ways of achieving goals.

I gladly recommend Irakli and believe that he will be an invaluable addition to your company.
